2019 ★★★★★ excellent

2018 ★★★★★ excellent

2017 ★★★★★ excellent

#### Latest sample assessment

★★★★★ indicates acceptable water quality: 22 September 2021

[Linked Data from Natural Resources Wales - OGI](#)

Water samples are taken at regular intervals during the bathing season and at the end of the season the water quality is classified as:

- Excellent: the highest classification meaning the water is cleanest.
- Good: generally good water quality.
- Sufficient: meets minimum standards.
- Poor: You are advised not to swim. The beach will stay open and an action plan should be in place to improve the water quality.

Water quality at Poppit is directly affected by water quality of the Teifi (although as always in these situations there are many factors which can affect both).
